

NO COST PREVENTIVE MEDICATIONS

by drug category

The Patient Protection and Affordable Care Act (PPACA), commonly referred to as “health care reform,” was signed into law on March 23, 2010. This important legislation will result in changes to every American’s health coverage including coverage of preventive health care services and certain medications with **no out-of-pocket cost** to individuals.

Health care reform provides specific preventive medications at no cost

Certain categories of drugs and other products have been included in the preventive care services coverage based on recommendations from the U.S. Preventive Services Task Force as well as the Institute of Medicine. These recommendations emphasize prevention of disease and meeting the unique health care needs of women.

The following products and prescription medications (as well as specific over-the-counter medications) may be available to you at no cost (copay, coinsurance and/or deductible) depending upon the terms of your plan.

Please see your plan materials or visit myCigna.com for details about how these products and medications may be covered under your plan. Remember, you can use the Prescription Drug Price Quote Tool on myCigna.com for real-time drug pricing specific to your plan. **You can also call the number on the back of your ID card 24 hours a day, 365 days a year, for help.**

You should consult with your doctor in choosing the product or drug that is right for you. This list is provided to help you discuss with your doctor the options that may be appropriate and available to you at no cost. A prescription from your doctor is required to process any claim for preventive care drugs or products under your pharmacy plan, including over-the-counter drugs.
